

Novoseje (Hormoqi)

41.9832844, 20.5694789

41.9815101, 20.5711752

This plant grows in northern, central and southeastern Europe, as is the case in northern and northeastern Albania. Hormoqi has a life span of 200-300 years, usually reaching a height of 25-35m, with a trunk diameter of up to 1-1.5 m. This kind of coniferous tree is evergreen. The plant requires strong sunshine, moist soil, good drainage and acidic soil. In this area of Kukes, there's a new 2 ha forest, which is simply natural, not artificially planted and with a dominance of 90% "Hormoq".
